COURSE DESCRIPTION

Z1-PU7

WYDANIE N1

Strona 1 z 3

1. Course title: Computer simulations in physics, technology and natural sciences		2. Course code: WM1		
3. Validity of course description: 2017/18				
4. Level of studies: 1 st cycle of higher education				
5. Mode of studies: intramural studies				
6. Field of study: COMPUTER SCIENCE				(RMS)
7. Profile of studies: general academic				
8. Programme: all programmes				
9. Semester: 5				
10. Faculty teaching the course: Institute of Mathematics				
11. Course instructor: Professor Władimir Mitiuszew				
12. Course classification: course of limited choice				
13. Course status: monographic				
14. Language of instruction: English				
15. Pre-requisite qualifications: Basic knowledge of data structures and algorithms. Basic knowledge of calculus and algebra. Basic knowledge of English. Skills to use computer on the basic level. Skills to operate by mathematical objects: calculation of derivatives and integrals, vector-matrix operations. Communication and project management skills to work in a team. Foundations of programming, theoretical foundations of computer science, mathematics, algorithms and data structures, programming procedures.				
16. Course objectives: The main course objectives is to teach students to use computer simulations and develop mathematical models in various topics of physics, technics and natural sciences. Selected real world applied problems in informatics, financial and economical sciences, biology, physics and technology are discussed. The special attention is paid to practical laboratory exercisers during which the students prepare individual and collective projects on the stated problems. Other goal of the course knowledge in applied mathematics and computer sciences in order to be prepared to the second level education in applied mathematics and informatics. The course is given in English.				
17. Description of learning outcomes: Student who has completed the subject:				
Nr	Learning outcomes description	Method of assessment	Teaching methods	Learning outcomes reference code
1.	W01: has general knowledge in the theory of models, fundamental algorithms and numerical methods	Test	Lecture/laboratory	T1A_W04
2.	W02: can use packages on symbolic and numerical computations	Test	Lecture/laboratory	K1A_W06
3.	U01: work out and develop mathematical models of the selected topics concerning informatics, mechanics, mathematics, physics, technology, economy	Project	Lecture/laboratory	T1A_U01
4.	U02: can prepare a project (document) concerning mathematical models and can propose a corresponding simulation method	Project	Lecture/laboratory	T1A_U01
5.	U03: can present the result of computer simulations in visual form including graphs, animations, can make conclusions on the basis of her/his results and can give practical recommendations	Project	Laboratory	T1A_W04 T1A_U01
6.	K01: can cooperate in a team to prepare a project, can cooperate with a customer (client) who has not the corresponding mathematical and computer knowledge and skills	Project	Laboratory	T1A_K01
7.	K02: can use various courses of information (including networks) to extend her/his knowledge and to get new skills	Project	Laboratory	T1A_U01 T1A_K01

19. Syllabus description:

1. Numerical and symbolic computations.
2. Continuous and discrete, linear and non-linear, deterministic and stochastic models.
3. Development of mathematical models and their computer implementation.
4. Computational methods for differential and integral equations.
5. Visualization and animation of graph procedures.
6. Least Square Method.
7. Random walk and its application to diffusion.
8. Interpolation and Fitting.
9. Asymptotically equivalent expressions and their computer implementation.

20. Examination: no**21. Primary sources:**

1. W. Krauth: Statistical mechanics: algorithms and computations, Oxford, 2006.
2. Z. Artstein, Mathematics and the Real World: The Remarkable Role of *Evolution in the Making of Mathematics*. Prometheus Books, Amherst, New York, 2014.
3. H. Gliński, R. Grzymkowski, A. Kapusta, D. Słota, *Mathematica 8*, Wydawnictwo Pracowni Komputerowej Jacka Skalmierskiego, Gliwice, 2012. (selected parts)
4. V. Mityushev, W. Nawalaniec N. Rylko, A. Malevich, *Podstawy matematyki przemysłowej, tom 1 – „Matematyczne modelowanie i symulacje komputerowe”, tom 2 – „Zagadnienia wielowymiarowe”, tom 3 – „Podstawy obliczeń, przykłady”,* Wydawnictwo Pracowni Komputerowej Jacka Skalmierskiego, Gliwice, 2010.

23. Total workload required to achieve learning outcomes

Lp.	Teaching mode :	Contact hours / Student workload hours
1	Lecture	30/20
2	Classes	/
3	Laboratory	30/30
4	Project	/10
5	BA/ MA Seminar	/
6	Other	/
	Total number of hours	60/60

24. Total hours: 120**25. Number of ECTS credits: 4****26. Number of ECTS credits allocated for contact hours: 4****27. Number of ECTS credits allocated for in-practice hours (laboratory classes, projects): 2**

26. Comments:

In the course student can collect 100 points: 30 points for the project, 30 points for the final test and 40 points for the laboratories. The grade will be given according to the number of collected points, in the following way:

41-55 p.: sufficient (3.0)

56-70 p.: plus sufficient (3.5)

71-80 p.: good (4.0)

81-90 p.: plus good (4.5)

91-100 p.: very good (5.0)
